

barujak.org

Beyond measuring vulnerability, this project seeks to **weave the lived experiences of Jakarta's kampung kota** into the analysis;

acknowledging that **people are more than numbers**, and that **vulnerability is also about memory, belonging, and justice**.

(C)2025 Baru Ruang Jakarta Initiative (BaruJak)

BaruJak.org is an experimental platform developed as part of the Hack4Resilient 2025 initiative. The information presented draws on publicly available sources, datasets provided for the event, and representative data to demonstrate key features.

As a prototype, the platform will continue to evolve and should be regarded as a pilot tool, not an official source.

Building the Knowledge of Kampung, together.

A collaboration section brings together ongoing and past initiatives on Jakarta's kampungs—whether from academia, government, NGOs, or the private sector.

By gathering themes, timelines, and participants in one place, it prevents duplication and encourages collaboration. Instead of scattered efforts, projects can build on each other, creating a **growing body of knowledge** on risk, vulnerability, and resilience in informal settlements.

Active Collaboration Opportunities [Propose New Initiative](#)

Preserve Our Water *Education & Outreach*

A public awareness and action program under Sobat Air Jakarta that encourages residents to take care of the city's water resources through simple, everyday practices. Jaga Air Kita invites citizens to play an active role in protecting Jakarta's water systems, reminding everyone that water security is not only the government's duty but a shared civic responsibility.

📍 Multiple Kampungs 🕒 Deadline: On-going 🧑 Community Residents, Kampung Cooperatives, Academics, NGOs

📌 Organizer: Sobat Air Jakarta (Jakarta Water Resources Agency) (Government Agency) [Learn More →](#)

The Sinking City Project *Data Collection, Research*

The Sinking City project brings together local communities, artists, and researchers to explore how environmental risks are experienced, understood, and imagined in Jakarta. By combining community knowledge, art practices, and data tools, we aim to create new ways of making risk visible and actionable. This is an open, collaborative process. We invite residents, students, and neighborhood groups to take part in shaping the research.

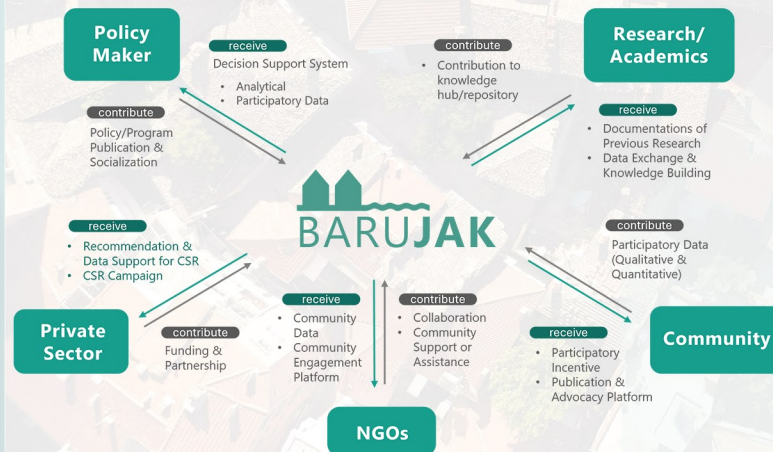

📍 Multiple Kampungs 🕒 Deadline: On-going 🧑 Community Residents, Kampung Cooperatives, Academics, NGOs

📌 Organizer: King's College London, Institut Teknologi Bandung, Resilient Development Initiative (Researcher/Academician) [Learn More →](#)

Bridging Gaps, Fostering Collaboration

BaruJak creates a cycle of mutual benefit. Communities share local knowledge and, in return, gain visibility and support. Researchers contribute data and insights, while accessing past studies to deepen their work. Policymakers receive decision-making tools informed by evidence and lived realities, and share programs back to the public. NGOs and the private sector find reliable data to guide advocacy, partnerships, and CSR efforts.

By linking these exchanges, BaruJak ensures that every contribution strengthens the collective capacity for a more resilient and inclusive

Unearthing Jakarta's Risk Scape

A participatory, data-driven platform for an inclusive and resilient Jakarta.

www.barujak.org

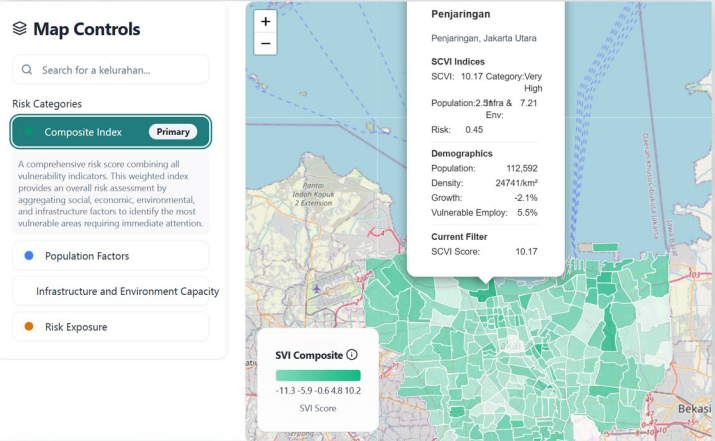

Jakarta’s environmental challenges are complex, from chronic flooding to accelerating land subsidence. The knowledge to address them exists—but it is fragmented across studies, agencies, and communities, slowing action.

BaruJak transforms scattered information into clarity. Through interactive maps, composite indices, and accessible insights, the platform bridges data with decision-making—spotlighting the city’s most vulnerable areas.

With BaruJak, researchers, NGOs, and policymakers can collaborate on solutions that are not only data-driven, but also responsive to the realities on the ground.

Thematic Risk Map and the Social Vulnerability Index (SVI) Composite Score

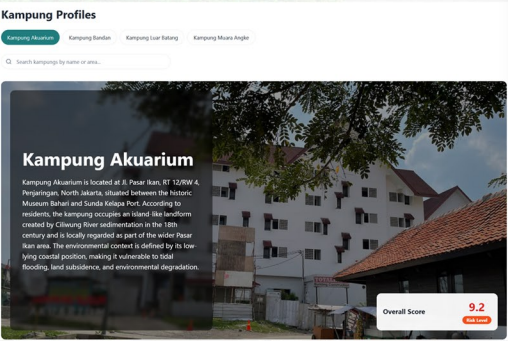

BaruJak risk map showcases vulnerability of each region across Jakarta in an easy-to-use, readable map and index, customisable by each dimensions.

Comprehensive Data Dashboard

An interactive dashboard is available to display various selectable data analysis, highlighting relationships between population, infrastructure & environment, and risk exposure to ensure informed decision making.

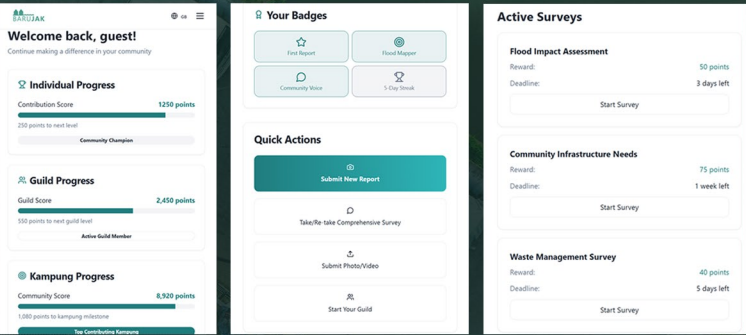

Kampung Profiles

A dedicated section to depict the qualitative dimension of the kampung neighborhood, kampung profile adds more in-depth, grounded data revealing the actual condition, aspirations, and ongoing mitigation efforts.

Contributor Account

As a participatory platform, BaruJak user can create individual accounts (or organized by kampung/neighborhood community leader). Resident's contributions enrich the platform and will be rewarded.

Progress bar
Incentivized by points and level system to encourage participation

Badges
Visible badges are given to achiever of specific mission

Survey Projects
Active survey projects (from interested researchers or govt agency) with rewards for participants.

Gamified; engagement- based user dashboard

Leaderboard
Various leaderboards are displayed to foster healthy competition. Capability to create 'tongkrongans' (guilds) embraces the social dynamics of the residents to form groups even across different kampungs/neighborhood.
